Custom Protein Purification in Yeast Expression System (for *Pichia pastoris* or *Saccharomyces cerevisiae*)

Cat#	Description	Price
CS101-1	Cloning a gene of interest into our vector or the vector of your choice: -Gene synthesis with codon optimization or PCR cloning -Sequencing verification for the expression vectors -Yeast Transformation -Small scale over-expression of target protein to check the expression level	\$700*
CS101-2	Large-scale protein purification from 1-3 liters of yeast culture:	\$3500**
Total cost from a gene sequence to protein		\$4200

*For the gene over 1.2 kb, the gene cloning price will be slightly higher.

** Price will be higher if a culture of more than 3 L is required.
